Aggressive calculator in java

In this code, if the user inputs "1+1," the calculator will respond with a humorous comment. For all other calculations, it provides the result as usual. Feel free to add more aggressive or funny responses as desired.

```java
import java.util.Scanner;

public class AggressiveCalculator {
  public static void main(String[] args) {
    Scanner scanner = new Scanner(System.in);

    System.out.println("Aggressive Calculator");
    System.out.println("Available operations: +, -, *, /");
    System.out.print("Enter the first number: ");
    double num1 = scanner.nextDouble();

    System.out.print("Enter the operation (+, -, *, /): ");
    char operator = scanner.next().charAt(0);

    System.out.print("Enter the second number: ");
    double num2 = scanner.nextDouble();
    double result = 0.0;
    switch (operator) {
      case '+':
        result = num1 + num2;
        break;
      case '-':
```

```java
            result = num1 - num2;

            break;

        case '*':

            result = num1 * num2;

            break;

        case '/':

            if (num2 != 0) {

                result = num1 / num2;

            } else {

                System.out.println("You can't divide by zero, genius!");

                System.exit(1);

            }

            break;

        default:

            System.out.println("Invalid operator! Are you even trying?");

            System.exit(1);

    }

    if (num1 == 1 && num2 == 1 && operator == '+') {

        System.out.println("1 + 1 is " + result + "? Seriously?");

    } else {

        System.out.println("Result: " + result);

    }

    scanner.close();

  }
}
```
